Take Charge of Your Own Health:

Know your ABC's

To help take charge of diabetes, know your ABC's:

A is the **A1C** test. It shows how well your blood sugars have been controlled over the last three months. The ADA recommends most people with diabetes keep the A1C below 7.

B is for **blood pressure**. Blood pressure is very important since high blood pressure makes your heart work too hard. Most people should have blood pressure at or below 130/80 according to American Diabetes Association clinical practice recommendations.

C is for **cholesterol**. Bad cholesterol, also called LDL can build up and clog your blood vessels, leading to heart attack or stroke. Most people should have an LDL level below 100.

Ask your health care provider what *your ABC's* should be!

The following chart guides you in keeping track of your diabetes health care.

				Visit 1	Visit 2	Visit 3	Visit 4	Visit 5	Visit 6
Tests	How often	Personal goal	Date:						
HA1c	Every 3 months								
Blood Pressure	Every visit								
Weight	Every visit								
Foot Exam	Every visit								

Yearly tests and examinations								
Test or exam:	Cholesterol	HDL/LDL	Triglycerides	Urine protein	Eye exam	Flu Shot	Pneumovax	Once time
Date:								

This project is funded by a cooperative agreement between the Centers for Disease Control and Prevention, Division of Diabetes Translation and the New Hampshire Department of Health and Human Services, Division of Public Health Services, Diabetes Education Program.
